

# Medium Large, a compact high-performance machine.

**DUSTER MEDIUM LARGE** is an extremely compact and manoeuvrable ride-on sweeping machine thanks to its balanced weight distribution. The dirt hopper, on the back, holds 90 l. and can easily be emptied.

**DUSTER MEDIUM LARGE** is available with dump height from ground level up to 1,5 m., either with a manual, a gas spring assisted or a completely electrical system. The filter has a surface of over 5 m<sup>2</sup>, among the largest in its category. The endothermic motor (in the internal combustion version H) comes with a front air inlet which ensures constant and appropriate cooling.

The traction, either hydraulic or electric, is provided

with a 5,5 hp Honda engine on the internal combustion version and by a 24 Volt system with 800 Watt power on the battery-operated version. The controls are of the touchless system type with immediate activation.

The central and the side brush start working as soon as they are lowered onto the floor without operating any other controls; when operating the filter shaker, suction is automatically stopped.

**DUSTER MEDIUM LARGE** is suitable for any dirt and working conditions thanks to its filters and to the different types of brushes, there are either nylon, mixed steel and natural fibre brushes all of which are available as standard or optional equipment.

ML 1  
In the basic model the large dirt hopper can be removed and easily carried away for emptying.

ML 2  
The mechanical dumping system enables emptying up to 1 m. height. (Choice of direct collection into proper plastic containers which are available as an optional kit).

ML 3  
With the version with the electric emptying system, dirt can be emptied directly into a container up to a height of 1,5 m by simply using a switch from the driver's seat.

The panel filter can be removed without the help of any tools for accurate cleaning. The textile filter for fine dust is available as optional equipment.

Self-adjusting central broom for proper contact with the ground. Flexible side brush to protect against bumps. Both of them can be removed and replaced without the help of any tools.
